## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 31 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fujino (JP 10-198129) in view of Kisu (JP 3-240076).

Fujino discloses an image forming apparatus comprising: a charger (2) that charges a body (1) with a voltage in which an AC voltage is superimposed on an DC voltage (abstract, line 9); and a humidity detecting unit (4) that detects a humidity in a space between the charger (2) and the body (1). According to humidity data received from the humidity sensor (4), the high voltage controller (5) controls the AC (abstract, lines 15-19).

Fujino does not disclose that the charger is not in contact with the body.

Art Unit: 2852

However, Kisu discloses an electrostatic charging device wherein the charging member is in a non-contact state with the body (abstract, line 7) to prevent the trace of the charging member and charging noise (abstract, lines 10-12).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the charger of Fujino with the gap taught by Kisu to prevent the trace of the charging roller and charging noise from occurring (abstract, lines 1-4).

In Fujino, according to humidity data received from the humidity sensor (4), the high voltage controller (5) controls the AC (abstract, lines 15-19). In the apparatus of Fujino modified by the gap of Kisu, the voltage controller is a means for minimizing an effect of a change in a width of the gap between the charger and the body. The “means for minimizing” limitation is considered to invoke 35 USC 112, sixth paragraph, and construed to mean that the AC voltage is adjusted based on humidity as provided by Applicant in page 11, lines 2-7 of the Specification.

#### ***Allowable Subject Matter***

Claims 1, 3-9, 11-17, 19-24, and 26-30 are allowed.

#### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a).

Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

Art Unit: 2852

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
